

Hot Fix to Patch Medisoft v16 Service Pack 1

Issue

The Hot Fix downloads in this article will load directly onto Medisoft v16 whether or not you have uploaded Service Pack 1 (SP1). The functionality of SP1 is included in this Hot Fix.

The following numbered defects have been fixed and loaded to the Hot Fix for Medisoft v16.

- 20021 – HL7 Messenger is not sending over patients with insurance assigned to the case
- 19891 – Medisoft Reports Exception EADSDatabaeError in module IReports.exe at 002F5143 tblPassword. *** NOT OK ****
- 19947 – No access to Medisoft reports when import1.txt file cannot be created on root of C drive
- 20036 – Medisoft Patient Account web install freezes before RM install, but after MSI for Medisoft is run
- 19862 – The wrong allowed amount is appearing in transaction entry
- 20014 – Making modifications to patient case or insurance causes payor ID to disappear
- 20049 – tblTransaction:Error 3111:Unknown identifier found in a record filter expression appears when searching for chart number
- 20061 – Deductible amount is not appearing on a Patient Remainder Statement
